# **MASTER in PHYSICS**

For each curriculum there are:

- 1. MANDATORY COURSES
- 2. 5 ELECTIVE COURSES THAT MUST BE CHOSEN IN APPROPRIATE LISTS
- 3. 2 ELECTIVE COURSES WITH NO CONSTRAINTS

### THE CURRICULUM AND THE ELECTIVE COURSES HAVE TO BE CHOSEN IN THE FOLLOWING PERIODS:

1) October 15 - December 15

2) February 1 - February 20

## ONLY ONCE IN EACH ACADEMIC YEAR!!!!

### THE CURRICULA CAN BE FOUND AT:

https://www.phys.uniroma1.it/fisica/sites/default/files/allegati/ Piani\_formativi\_magistrali\_LM17.pdf

# **Curriculum in THEORETICAL PHYSICS**

For students interested in

- 1) Physics of fundamental interactions (theory)
- 2) General relativity and theoretical astrophysics
- 3) Statistical mechanics and the physics of complex systems
- 4) Mathematical physics

People interested in condensed matter theory should consider the curriculum in condensed matter, while the biosystem curriculum is more appropriate for those that would like to study (theoretically) problems at the boundary of physics, biology and chemistry

## Theoretical physics of the fundamental interactions

One analyzes the structure of matter at the subnuclear level. The aim is that of giving predictions that can be compared with experiments at accelerators like CERN, in neutrino experiments... A new subfield is "Astroparticle physics"

## **Theoretical Astrophysics**

Here one studies the structure and evolution of stars and black holes, gravitational waves (theory) in close connection with the experimental groups, cosmology ...

## Complex systems and statistical mechanics

addressed to students interested in the study of

- disordered systems, spin glasses, structural glasses, the statistical behavior of systems with intrinsic disorder
- statistical mechanics (both at the classical and quantum level) of nonequilibrium systems.
- interdisciplinary activity on dynamic large-scale phenomena that occur in fields "beyond" physics (from biology to economics and social sciences) but that can be understood using statistical mechanics methods.

CFU = number of credits Anno = year (first or second year) Sem. = semester in which the course is taught Eng = in English (Y) or in Italian (N)

SSD:

FIS: Physics course CHIM: Chemistry course BIO: Biology course INF: Computer science course MAT: Mathematics course

FIVE MANDATORY COURSES (same for all curricula) 3 COURSES FROM GROUP A 2 COURSES FROM GROUP B

2 ELECTIVE COURSES (CORSO A SCELTA LIBERA)

Among the 7 courses, the student must choose 1 course which is NON-FIS, i.e. labelled INF, MAT,CHIM, BIO

## MANDATORY COURSES: PHYSICS LABORATORY

THERE IS A FIRST SEMESTER COURSE (THEORY) AND A SECOND SEMESTER COURSE (LAB ACTIVITY) : TWO DIFFERENT EXAMS.

THE EXAM OF PHYSICS LAB I SHOULD BE PASSED BEFORE THAT OF PHYSICS LAB II

There are different labs that depend on the chosen curriculum

## **Different labs**

A) Particle and Astroparticle: Prof.CAVOTOB) Condensed Matter: Prof. MARIANIC) Biosystems: Prof. BORDI

THEORY CURRICULUM:

- 1) students interested in high-energy physics or general relativity should take LAB A)
- 2) all other students will choose the LAB coherently with the chosen curriculum

## MANDATORY COURSES: RELATIVISTIC QUANTUM MECHANICS

### TWO DIFFERENT COURSES:

a) GENERAL COURSE (4 hrs/week, it ends in January) Prof. Massimo Testa.

b) COMPRESSED COURSE (8 hrs/week, it ends before November 15th) Prof. Roberto Bonciani

This course is mandatory for the Particle and Astroparticle Physics curriculum

The students who intend to take Electroweak Interactions must take this course.

# "Free choice" courses: one at the first year, one at the second

The first year: it is possible to schedule a course which is given at the second year (i.e. to anticipate a second year course)

However: it is not possible to schedule in the second year a first year course (i.e. to postpone a first year course) because it may no longer be active (professor retiring or moving to another university etc.) How many courses should be scheduled every year?

The curriculum must be balanced

FIRST year: 5 mandatory courses + English = 37 CFU 4-6 more courses = 24-36 CFU

SECOND year: 1-3 courses = 6-18 CFU thesis + internship = 41 CFU

unbalanced curricula will not be approved

Thesis: students are advised to decide the subject and the advisor of the thesis at the beginning of the first semester

NOTE: the thesis should be consistent with the chosen curriculum and with the elective courses that one is taking.

## INTERNSHIP(3 CFU): how it works in practice

1) After two months of working on the thesis, the thesis advisor should give the student a signed form, which certifies the work that has been done.

2) The student should register in INFOSTUD (same procedure as that for an exam) **in the due time.** 

3) The day of the exam the student should go to the professor in charge of internships:

Particle and Astroparticle: Prof. Bagnaia Condensed Matter: Prof. Mariani Biosystems: Prof. Bordi General Theory: Prof. Bonciani

To be registered: the student must show the form signed by the advisor and the standard form to register the exams to the professor in charge. Finally, the student will bring the form signed by the advisor to the secretary Marco Dante

### Gruppo B (aff.-int.)

## GROUP B: you have to choose 2 courses in this list

WARNING: each course has to be chosen in the right year and in the right semester

GROUP A or B:

- 1) Electroweak interactions [strongly suggested for high-energy physics]. It starts in November, when Rel. Quantum Mech (Bonciani) ends.
- 2) Meccanica Statistica e fenomeni critici [strongly suggested for those interested in Statistical Mechanics and Complex systems]
- 3) Relatività Generale [strongly suggested for those interested in theoretical astrophysics]

### Some constraints:

1) "Electroweak interactions" should be taken before "Simmetrie e interazioni fondamentali" and "Weak interactions in the standard model and beyond"

2) "Simmetrie e interazioni fondamentali" should be taken before "Weak interactions in the standard model and beyond"

3) "Quantum electrodynamics" or "Statistical mechanics and critical phenomena" should be taken before "Quantum field theory"

4) "Statistical mechanics and critical phenomena" should be taken before "Statistical mechanics of disordered systems"

5) "Relatività generale" should be taken before "Onde gravitazionali, stelle e buchi neri"

For those who choose the High Energy Physics curriculum (theory) "Introduction to particle physics", (prof. Kado) is strongly suggested (experimental course for theorists)

The course Computing methods for Physics (Prof. Rahthlou) is also suggested for the HEP curriculum

Computing methods for Physics (prof. Crisanti) is indicated for the other curricula in theoretical physics

Computing methods for Physics is labelled as INF and satisfies the NON-FIS constraint
